Hiring Manager
Pranon Express Limited

Dear Hiring Manager,

I am writing to apply for the **Junior Laravel Developer** job at **Pranon Express Limited**. I have strong experience in Laravel backend development, API security, and building systems that can grow easily and handle many users at once.

I worked on several projects like ***All Job Pro*** and ***Wallpaper HUB***, where I built RESTful APIs with JWT or Sanctum authentication. I added payment systems, admin dashboards, and made sure the apps could handle lots of users smoothly. These projects helped me understand how to build secure and fast systems for real-world use.

Right now, I am doing my Master's in Computer Science at North South University. I also finished my Bachelor's in CSE. I am good at PHP, Laravel, MySQL, Git, and Postman. I always try to follow best practices in coding, testing, and teamwork.

I am very excited about Pranon Express Limited because you focus on solving big problems like scalability, real-time performance, and handling millions of requests. I want to be part of that challenge.

Thank you for reading my letter. I hope to join your team and help build great backend systems.

Best regards,

Md. Rubayet Islam Ifti
